

# GitHub: Fork

Ana Giulia Nascimento, Felipe Las Casas e Rafael Emerick

# Do que se trata?

# Fork e a sua finalidade

Um **fork** é um novo **repositório** que compartilha configurações de código e visibilidade com o repositório **original**. Os forks geralmente são usados para **acrescentar** ideias ou **alterações** antes de serem **propostas** de volta para o repositório original, como em projetos **código aberto** ou quando um usuário não tem acesso de gravação ao repositório original.

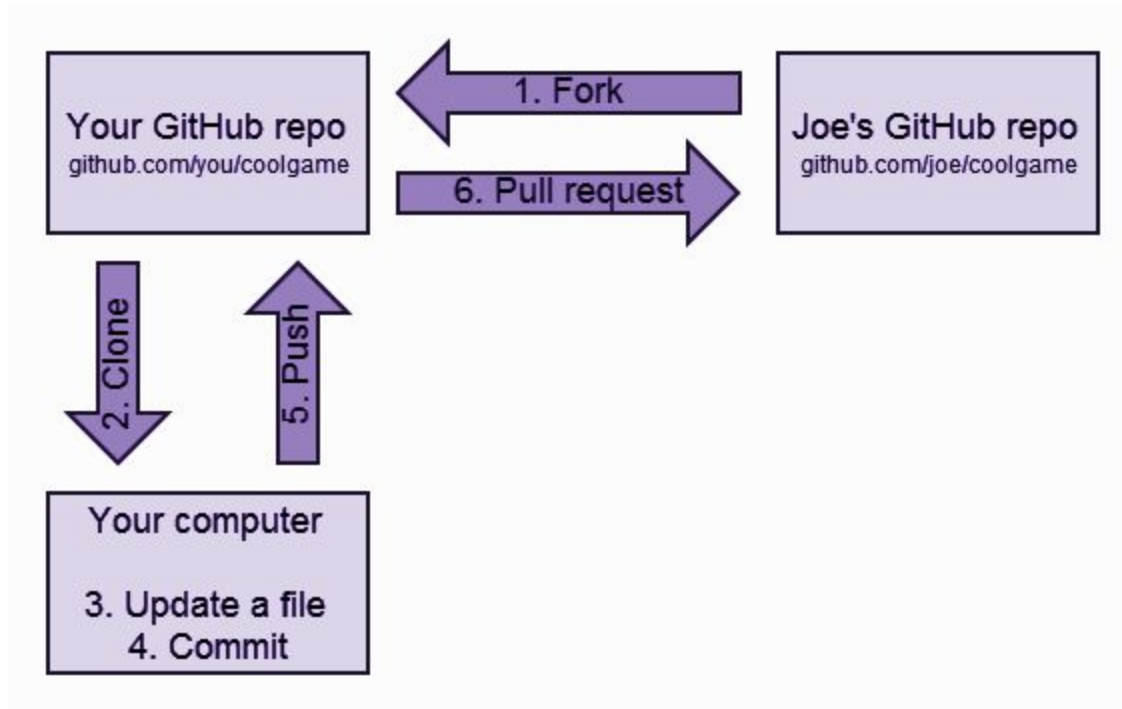

# Exemplo de uso

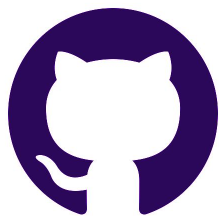

Realizar um fork para propor alterações relacionadas à correção de um bug.

Etapas a serem seguidas:

- Criar um **fork** do repositório.
- Fazer a **correção**.
- Enviar um **pull request** ao proprietário do projeto.
